DEFIANCE COUNTY ADDRESSING SYSTEM

Each address is a 5-digit number. The first two digits of each number refer to the road, with regard to its placement in the county. Each road in the county is numbered in increasing numbers from west to east and north to south. The last three digits are the proportionate distance between section lines where the building addressed is located. The fifth digit is an odd number if the residence is on the north or east side of the road, or an even number if it is on the south or west side of the road.

Example: A building is situated on the south side of an east-west road, between the third and fourth north-south section lines. The distance between the two section lines is determined to be 6,200 feet. The residence is positioned at the 550 foot point.

The first two digits of the number would be '03' because of its position between the third and fourth north-south section lines.

The last three digits would be determined by the following formula:

1000 = X X = 88+
6200 550

Since the residence is located on the south side of the road, the number would be 88 (even) and would be shown as '8858' (a three digit number). Therefore, the number of the residence would be determined to be '03058'.
